PROFESSIONAL SUMMARY

Mid-level Software Engineer specializing in verification and validation within cloud and research environments. Led validation testing for AI/ML models in a DeepFake MRI detection project, delivering reproducible results and improving model robustness. Designed automated data pipelines on AWS and Azure, reducing manual effort and ensuring data quality across CRM systems. Eager to leverage testing expertise and data-engineer skills to drive reliable, high-quality software releases.

Key Competencies

- **Software Verification & Testing:** Data Validation & Quality Assurance, Test Case Design & Execution, Defect Investigation & Resolution, Verification & Validation (V&V)
- **DevOps & CI/CD:** Azure DevOps, CI/CD Pipelines, Docker, Kubernetes (AKS), Git, Version Control, Terraform, Infrastructure as Code (IaC)
- **Data Engineering:** Azure Synapse Analytics, Azure Data Factory (ADF), Databricks (Spark), Delta Lake, SQL, ETL/ELT, Data Modeling
- **Programming & DBs:** Python (Pandas, NumPy), Bash/Shell, SQL (T-SQL, PostgreSQL), MongoDB, REST APIs, Backend Development
- **Cloud Platforms (IaaS/PaaS):** Azure (Expert), AWS, GCP, Azure Virtual Machines (VMs), Azure SQL, Azure Functions, Azure Blob Storage, S3, RDS

Certifications

- **Microsoft Azure Fundamentals: AZ - 900**
- **Data Engineering on Microsoft Azure: Coursera**
- **Building Batch Data Pipelines on Azure: Coursera**
- **Modern Data Warehousing with Azure Synapse Analytics: Coursera**
- **Big Data Analysis with Spark and SQL: Coursera**

Work History

Virginia Commonwealth University

Graduate Teaching Assistant

Richmond, VA · Jan 2026 - Present

- Assist the professor in delivering Computational Methods and Data Science course content for undergraduate and graduate students, using Canvas to organize lectures and Azure DevOps pipelines to share code examples, which increases student engagement and attendance
- Evaluated assignments, quizzes, and exams for 100+ students, ensuring timely and fair grading.
- Conducted office hours to clarify concepts in Python, algorithms, and data analysis, improving student understanding.
- Supported students with debugging code and project implementation, enhancing hands-on learning outcomes.
- Collaborated with faculty and TAs to maintain course materials, assignments, and grading rubrics on Canvas
- Monitored student progress and provided constructive feedback to improve academic performance.
- Helped manage course logistics including announcements, deadlines, and student queries.

Graduate Research Assistant

Richmond, VA · Jan 2025 - Aug 2025

- Performed structured validation testing of AI/ML models using Azure DevOps pipelines and Bash scripts, running multiple controlled evaluation scenarios on GCP; confirmed model performance met predefined accuracy thresholds
- Designed and executed test scenarios to verify model robustness, accuracy, and reproducibility in DeepFake MRI detection research.
- Conducted requirements-based evaluation of research workflows to ensure consistency and traceability.
- Documented validation results, experiment configurations, and performance metrics to support reproducibility and review processes.

EngageBay

Data Engineer – EngageBay

Hyderabad, India · Dec 2022 - Jun 2024

- Designed and implemented automated data pipelines for CRM data processing using Python (Pandas, NumPy) and AWS S3, enabling reliable daily data loads and reducing manual setup time
- Managed cloud storage and data workflows by maintaining structured backups and daily snapshots in AWS S3.
- Streamlined data processing by developing automation scripts, reducing manual effort and improving efficiency.
- Performed data validation and monitoring to ensure data quality, consistency, and reliability across pipelines.
- Identified and resolved data pipeline failures and inconsistencies, improving system robustness.
- Collaborated with team members to integrate data workflows into scalable system architecture.
- Documented deployment steps and workflows, enabling smoother onboarding and reproducibility.

- Applied version control using Git/GitHub for managing code changes and maintaining project consistency.

Key Projects

MGF Sourcing Modernization

- Built complex ADF pipelines to integrate data from Azure SQL, SharePoint, and Smartsheet. Queried Delta Lake via Synapse SQL to streamline reporting.

MDM Core System

- Deployed and configured high-availability services (Tomcat, Kafka, PostgreSQL) on Azure. Built dedicated CI/CD pipelines for Kubernetes-based deployments.

Data Quality & Integration

- Implemented SQL-based validation rules to detect anomalies and inconsistencies in master data systems.
- Performed data reconciliation between transactional systems and reporting layers.
- Documented validation logic and testing results to ensure repeatability and traceability.

Heart Disease Prediction

- Engineered a Machine Learning Classification Model to predict heart disease risk using patient health data. Focused on data preprocessing, feature selection, and model evaluation to achieve high predictive accuracy.

Data Validation & Analytics Verification

- Configured structured validation queries in Azure Synapse to verify curated datasets stored in Azure Data Lake.
- Designed SQL-based test cases to validate reporting datasets before release to business users.
- Implemented consistency checks to ensure accurate transformation and integration of datasets. Improved reporting reliability by implementing structured validation checkpoints prior to analytics consumption.

Education

Virginia Commonwealth University

Masters, Computer Science

Aug 2024 - May 2026

Richmond, VA

VelTech University

Bachelors, Computer Science

Jun 2020 - Aug 2024

Tamil Nadu, India
